

ARCHIPEL II

GALAPAGOS

ITINERARY

B

4 DAYS / 3 NIGHTS
Monday to Thursday

ROUTE

HIGH CHANCE OF SPOTTING:

Booby colonies

Green Sea Turtle

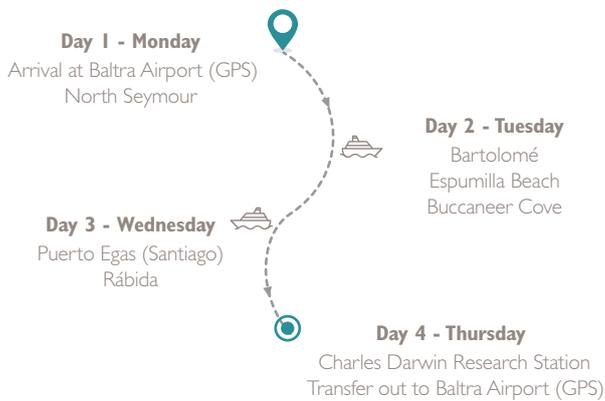

Galapagos Sea Lion

Galapagos giant tortoise

Nazca boobies

DAY 1 - MONDAY

AM - Arrival at Baltra Airport (GPS)

Upon arrival at Baltra Airport, travellers pass through an airport inspection point to make sure that no foreign plants or animals are introduced to the islands, and to pay the park entrance fee of \$100 (unless it has been prepaid). A guide will meet you, help you collect your luggage, and escort you on a short bus ride to the harbour.

PM - North Seymour

This islet is one of most visited sites, and it is teeming with birdlife. An easy circular path takes you through the archipelago's most extensive colonies of blue-footed boobies and frigate birds. At the beginning of the breeding season, adult frigatebird-males blow up their vivid red pouches to impressive football-sized balloons. This is one of the few spots where you can compare the magnificent and the great frigatebird breeding next to each other.

DAY 2 - TUESDAY

AM - Bartolome

The beautiful volcano islet of Bartolomé is among the youngest of the islands, and on a geological scale was just recently born out of fire. Although at first sight lifeless, Bartolomé offers some of the wildest landscapes and best panoramas in the entire archipelago. To enjoy the postcard view of the idyllic 'Pinnacle Bay' you have to climb the stairs to the viewpoint on top of the island (114m/375ft). Enter a dramatic world of threatening (though extinguished) nearby spatter cones, craters, and lightweight lava droplets that have been spewed out by fiery fountains. The Summit Trail is also ideal for witnessing how scanty pioneer vegetation such as lava cactus is struggling to take root in the bare virgin lava fields.

PM - Espumilla Beach, Buccaneer Cove

Espumilla Beach is an important breeding site for turtles, as it is no longer suffering from digging wild pigs. The turtles return year after year to bury their eggs into the cinnamon-coloured sand dunes. About two months later (roughly from February to August) the eggs hatch.

The beach ridge hides a mangle with two lagoons on the backside. A colony of American flamingos and aquatic birds used to be its main attraction, but after the climate phenomenon of El Niño, strong sedimentation altered the water environment, and now no longer provides their food.

DAY 3 - WEDNESDAY

AM - Bartolome

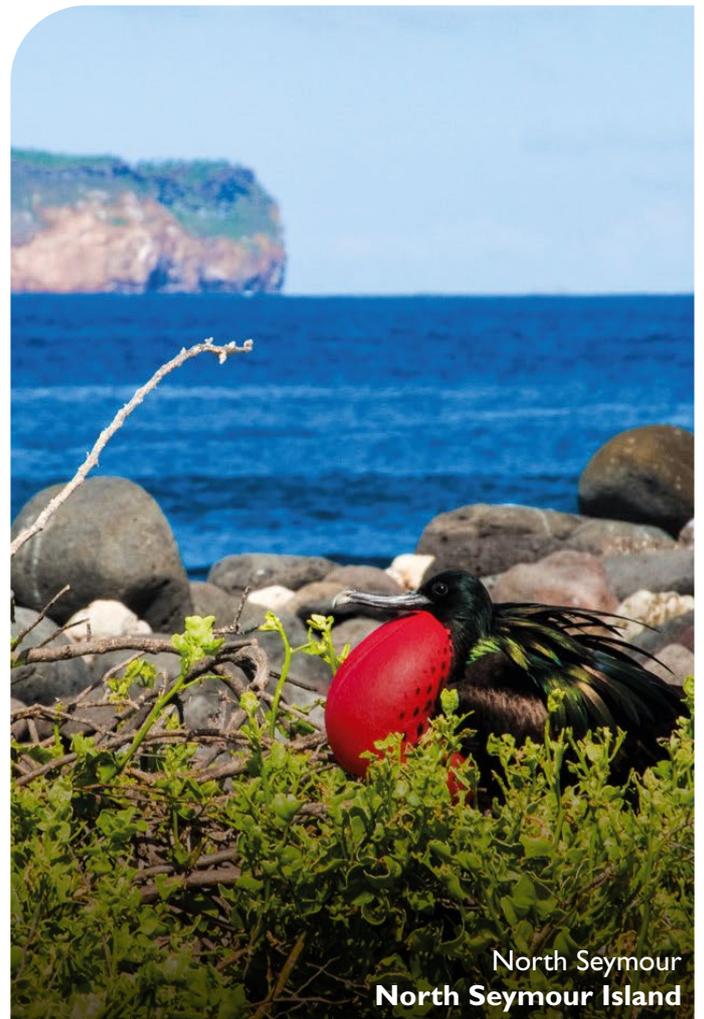

The beautiful volcano islet of Bartolomé is among the youngest of the islands, and on a geological scale was just recently born out of fire. Although at first sight lifeless, Bartolomé offers some of the wildest landscapes and best panoramas in the entire archipelago. To enjoy the postcard view of the idyllic 'Pinnacle Bay' you have to climb the stairs to the viewpoint on top of the island (114m/375ft). Enter a dramatic world of threatening (though extinguished) nearby spatter cones, craters, and lightweight lava droplets that have been spewed out by fiery fountains. The Summit Trail is also ideal for witnessing how scanty pioneer vegetation such as lava cactus struggles to take root in the bare virgin lava fields.

PM - Sullivan Bay (Santiago)

Setting foot at the lava stream covering Sullivan Bay is like landing on the moon. The desolate, stretched-out fields seem mostly lifeless, but there is plenty to see on this highly popular site amongst photographers. Pacific green turtles seasonally bury eggs in the tiny white sand beach, where you might also encounter crabs, a strayed blue heron or an oystercatcher. On the lava flow, only sparse pioneer vegetation such as lava cacti and carpetweed are able to grow.

Vegetation zones are very close by, providing great scenic contrasts. During the climb up a hill, you will be rewarded with a beautiful view of the transitions from sea to beach and from mangrove to a dry palo santo forest.

At nearby Buccaneers Cove, there is a great snorkelling opportunity.

North Seymour
North Seymour Island

Charles Darwin Research Station

Although the great majority of Galapagos visitors come here to observe and appreciate natural wonders, it is also interesting to learn how the protection and conservation of the islands are carried out. The main attractions are the National Park information centre, the Van Staelen Exhibition Hall, the Breeding and Rearing Centre for young tortoises, and adult Galapagos tortoises in captivity.

Transfer out to Baltra Airport (GPS)

Assisted by the naturalist guide and some crewmembers, the dinghy will bring you and your luggage to Baltra Airport, where we will take the shuttle back to the airport.
